

Swing-A-Way Series™ eBrochure

The Swing-A-Way Lift's unique design allows you to board parallel to the van. Wheelchair and scooter users are well aware of the challenges that tight parking spaces can create. Our Swing-A-Way Lift was designed to eliminate concerns over the ability to enter or exit your vehicle in these situations.

The unique design makes it possible to only need as much space as your front door will need when it is fully opened. The side-mount platform minimizes the need for extra space by allowing you to board parallel to the van. Plus the low ramp angle makes boarding easy.

Once the lift reaches floor level, the single-post design allows the platform to swing into the vehicle, where it stores flat on the vehicle floor. This horizontal storage provides an unobstructed view out the side windows for the driver. The handrail also folds down, leaving the side door open for easy access for friends and family that may be travelling with you.

Tight Parking Situations & Ambulatory Access

	Swing-A-Way Series™
Platform Width	74 cm
Platform Length	92 cm
Lifting Capacity	363 kg
Hand-Held Control	Standard
Manual Backup	Standard
Remote Control	Optional
